Introduction

The SJC Mathematics Society was established in 1991 and has long been successful in promoting the joy of exploring Mathematics and giving trainings to mathematic enthusiasts and talents throughout these 24 years. The Society has engaged in numerous internal and external activities which includes consistent regular trainings, recruitment tests, joint school mathematics event etc..

Recruitment week 2014

The recruitment week is a total success. Many students join the mathematics society, and it provides us a chance to introduce them the intrinsic beauty of mathematics. Besides, tie pins, maths journals and membership cards are distributed as souvenirs for students entering the club. This increases the attractiveness of our club.

Internal Mathematics Selection test 2014

The Internal Mathematics Selection Test were carried out in late November. It successfully spotted out some previously unnoticed mathematics talents in F1-3. They were then invited to join the Mathematics Special Class, which enhanced their knowledge in mathematics and prepared them for future competitions such as HuaXia Cup, Interschool Mathematics Contest, Hong Kong Mathematical Olympiad, International Mathematical Olympiad Preliminary Selection Contest as well as the Hang Lung Mathematics Award. This can help build up their interest and provide them with opportunities to show their strength.

Mathematics Journal

The mathematics journal is published annually to act as a kind of magazine aimed at improving students' interest in mathematics as well as unearth their latent interest on it. It is distributed in the Annual General Meeting for free to Math Society members, and with a low price to outsider in Open Day. It includes topics such as an introduction to Euclid's Element and a glance of the basic concepts of vector.

140th Anniversary Green and White Day

This year's stall design continues the theme of mystery solving. Instead of the maze design like last year, this year has a new stall design called "the Labyrinth". It is a game similar to the in vogue Escape Hong Kong mystery game, in which participants are required to use the clues hidden in a locked room, resolve the puzzle and seek out the access code to the next room. This game is aimed at combining mathematics and games together, to provide a new and unique enjoyment of mathematics. During the Open day, visitors including secondary school students and even primary school students with their parents came to the stall, and most of them give positive comments to it. Furthermore, souvenirs such as compass etched with the Maths Society logo are sold with a low price, which received a lot of positive responses.
